API Project Checkpoint - Deryn Boscariol
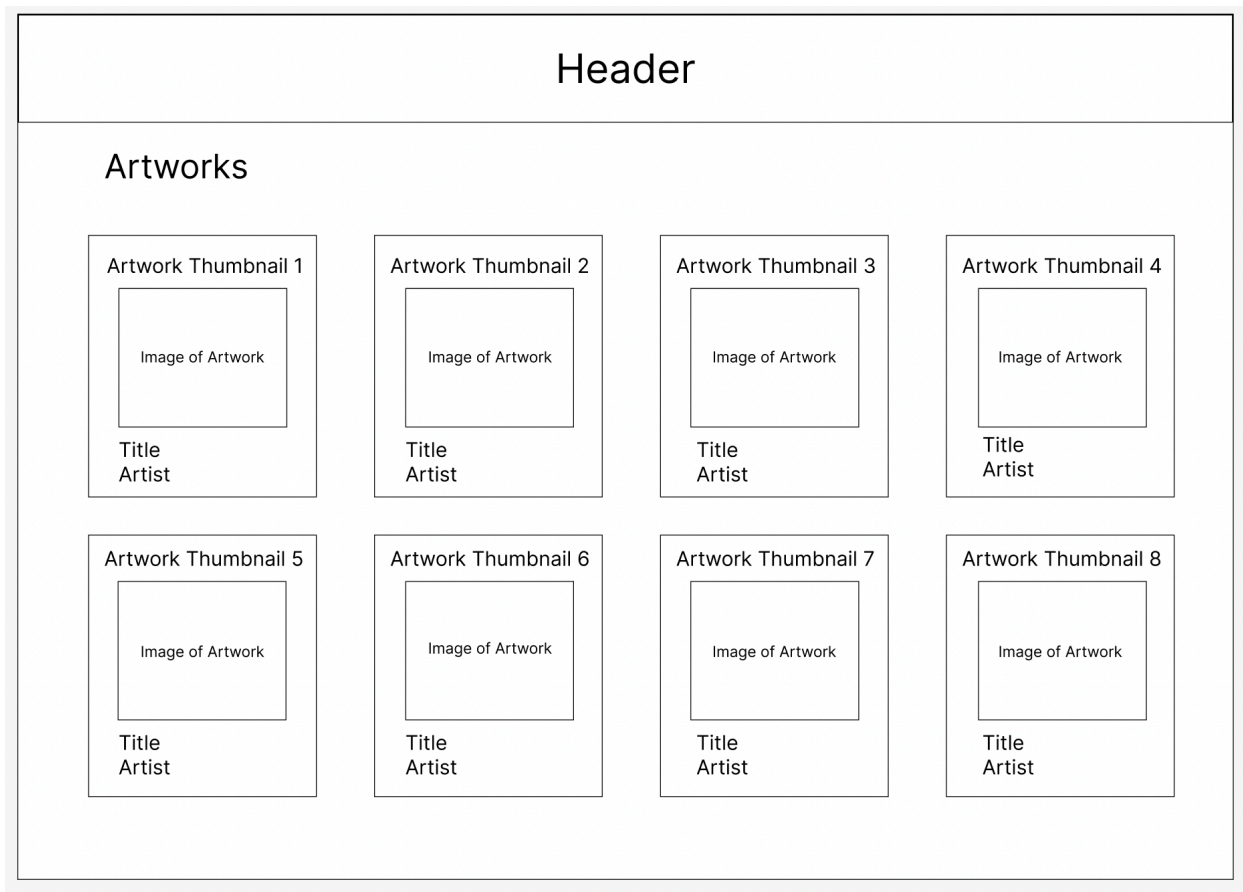

For my project I will be using The Metropolitan Museum of Art Collection API and the Google Maps Aerial View API to create a website where users can browse through artworks and see a 3D aerial view of where the selected piece originated. My MVP will consist of two different page types. The first will be the homepage that will list out all the artworks and provide an image. Clicking on the image will direct the user to a webpage that displays the selected artwork, various information about it (date, artist, etc) and a 3d rendered aerial view, allowing the user to see an up close view of the location where the piece was made or found. If time allows, I would also like to integrate a search bar feature onto the homepage so that the user can navigate better through the artworks.
